

1  
Log In page. Users have the choice of either logging in via Facebook or Google account.

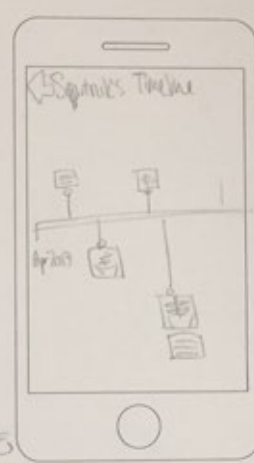

2  
Home page. On here, users can access all other parts of the application.

3  
Settings. This is app-wide settings such as notifications, appearance, and account settings.

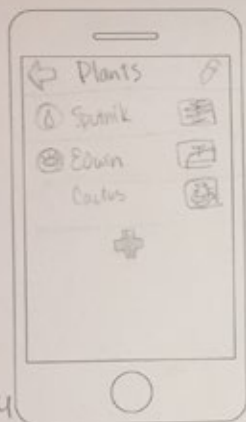

7  
Notification. Example of what a notification would look like.

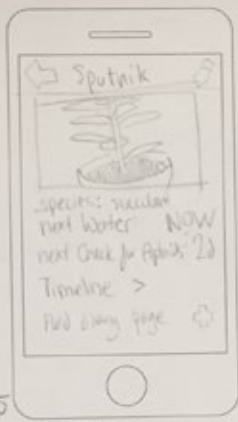

8  
Timeline. Each plant has a visual timeline containing photos and diary entries.

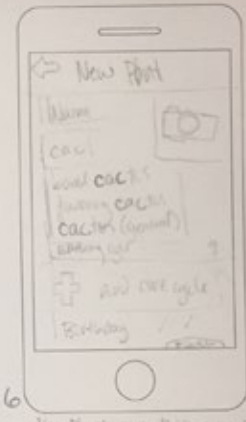

9  
New Diary Entry. Add a photo and write an entry in text.

4  
List of user's plants. Users can edit the list, delete plants, add new plants. Also shows which plants need care. Tapping on a plant goes to its own page.

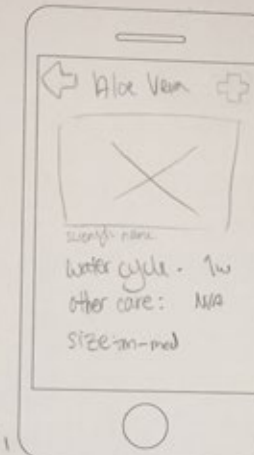

5  
Plant Page. Contains photo and care info, as well as options to add updates, edit the page, and view its history.

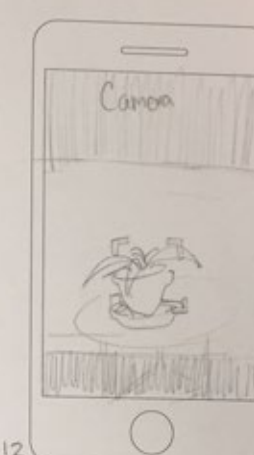

6  
New Plant page. Add a new plant to the list with fields such as name, photo, species, watering cycle, amount care needed, and location. The species dropdown will appear as you type, and if it's a recognized species, it will automatically add a watering and amount care cycle.

10  
Search Page. Search using text box and using filters on the options.

11  
Species details. Image, name, other info, and the ability to add directly to the plant list.

12  
In-app camera, to take photos of your plants.
